

Guide to Chemical Research

Presenters:

Sandra H. Kajiwara

San Jose State University

Introduction

- Chemistry students often want specific data, like a boiling point, rather than an array of journal articles on a topic.
- Library catalogs are not organized to lead students to specific chemistry data.
- Most librarians do not have any chemistry background.
- How can students find specific chemistry data? ♦

Our Database

- Designed to be used by anyone - student, faculty, librarian, or community member.
- Does not require extensive knowledge of chemistry.
- Can be used remotely via the Internet.
- Can be used for **other subjects**. ♦

Parts of the Database

Administrative View

- This part is not on public view.
- It allows the administrator to add, delete, change, or update any record in the Source List or the Alphabetical List.
- In addition, one can add or delete *connections* between the words and the sources.
- It is called the Terms and Sources Manager. ♦

Terms and Sources Manager

Has four administrative parts for adjusting the entire database:

1. Complete Terms List
2. Complete Sources List
3. Add Term
4. Add Source

Complete Terms List

- View terms in alphabetical order with connected sources underneath.
- Administrator can edit, delete, or dissociate all the sources under each term.
